Projects

GenDiversity — Genetic Diversity Risk Estimator

Team Project

HTML, CSS, JavaScript · [Repo](#) · [Live Demo](#)

Educational web application that simulates population genetics using the Wright-Fisher model, allowing users to explore how mutation, migration, natural selection, and genetic drift influence genetic diversity over multiple generations.

- Collaborated with a team to design and develop an interactive educational web application.
- Contributed to building a user-friendly interface for visualizing genetics simulations.
- Assisted in integrating application features, testing functionality, and refining the overall user experience.
- Gained practical experience working in a collaborative software development environment.

GoBite — Places & Restaurant Discovery App

Solo Project

React, TypeScript, Google Maps Platform API · [Repo](#) · [Live Demo](#)

A place-discovery web app that helps users find highly-rated restaurants, cafes, bakeries, and hotels nearby, built on the Google Maps Platform.

- Built a location-based place discovery app using the Google Maps Platform API for restaurants, cafes, bakeries, and hotels.
- Integrated an AI assistant that lets users find highly-rated places using natural language queries.
- Implemented category filtering, a favorites and wishlist system, and guest and signed-in browsing modes.
- Designed a fast, responsive interface relying only on official Google data, without storing user location.
